

Environment

Added Features

- Rock and vegetation being added at the base of the bridge blends with the natural features of the river valley

Environmental Studies and Investigations

- An Environmental Screening Report was completed in November 2016 to assess and mitigate potential environmental impacts
- Effects on vegetation, wildlife, soil quality, fish habitat, visual aesthetics, noise, and recreation and land use were all assessed and mitigation measures will be implemented during construction

Regulatory Approvals

- The City is working with the Department of Fisheries and Oceans as well as provincial bodies to meet regulatory requirements and plan according to best practices and environmental stewardship
